

Jumeirah Al Naseem

Client: Jumeirah Group
Consultant: CKR Consulting Engineers / DPA Lighting
Contractor: BK Gulf

Scope: Supply, Testing & Commissioning of Lighting Control System
Time of Execution: 36 weeks

Jumeirah Al Naseem in Dubai is one of the world's finest luxury resorts.

Called in to supply, test and commission the lighting control systems in public areas such as the main lobby, lounges, restaurants and the pools, we have integrated the complete dimming system with the existing IT network. The operator can monitor, control, and program the system using their Smart Phones, Tablets, or PC over Wi-Fi without the need of any specialized licensed software.

This integration enabled by 'Internet of Things' has created smoother operational efficiency and sustainability because machines, computers and people are talking to each other on the Internet.

This project also needed pre-wiring, customization of enclosures for every area and the electrical protection devices before delivery. Given the project's size, location and the need for a robust system we convinced stakeholders of Mode Lighting's suitability for the project. Finally, it was a successful product demo of Mode Lighting control systems that clinched the deal.
